

Your Partner for Electrification

Electric, hydraulic or hybrid – Everything from a single source

Technological change is in full swing. During the development of our solutions, we have set great store by energy efficiency, energy conservation and environmental friendliness for many years now. Automation and the electrification of holistic systems play an increasingly important role at BIBUS Ukraine and are progressively coming to the fore. The physical advantages of hydraulics in conjunction with the functionality of electric drive technology are opening up unprecedented opportunities for the development of new solutions.

Electromobility has also become a megatrend in the off-highway sector. BIBUS Ukraine has already realised numerous electrification projects in sectors ranging from railway vehicles to lorries. For this purpose, we have access to a wide-ranging, high-quality product portfolio and extensive know-how gained from many years of engineering experience. A wide variety of systems have already been produced using our highly efficient, high-performance products. Together with the field proven PLUS+1 control and our own software development, it is possible to perfectly fulfil all requirements in the field of energy saving, emissions reduction and automation.

Irrespective of the technology: BIBUS Ukraine draws on decades of experience in order to offer you the best possible solution tailored to your needs.

We are looking forward to working with you to implement your new project, true to our corporate philosophy: «supporting your success»
